Experience

Muno AI Private Limited

Feb 2026 – May 2026

Software Engineer Intern

Remote

- Reduced code redundancy by **50%** by designing reusable UI components, improving maintainability, consistency, and development efficiency across the application.
- Developed **40% of the Employee and Manager dashboards** using **TypeScript**, delivering scalable and responsive frontend features.
- Designed, tested, and debugged **30+ REST API endpoints** using Postman, maintaining API response latencies of **under 20ms**.
- Built the **backend for Muno AI's marketing website** using Node.js, handling user form submissions and automating email workflows with **Nodemailer**, achieving email dispatch times of **under 3 seconds**.
- Implemented **JWT-based authentication**, request validation, and centralized error handling to secure protected routes and improve API reliability.
- Collaborated on a **microservices-based architecture**, contributing to backend service development, API integration, and inter-service communication across multiple services.

Projects

AI-Powered Online Learning Platform | *Next.js 16, PostgreSQL (pgvector), Docker, Nginx, AWS EC2* [GitHub](#) | [Live](#)

- Architected a decoupled Express microservices backend with **3 Docker replicas** behind an **Nginx load balancer**, improving AI query throughput by **300%**.
- Built a **Retrieval-Augmented Generation (RAG)** pipeline using Gemini embeddings and PostgreSQL **pgvector** for semantic search with **sub-50ms vector retrieval**.
- Implemented **query rewriting** and **short-term conversational memory** to improve retrieval quality and preserve context across follow-up questions.
- Designed exponential backoff retry logic for API rate limits (429 errors) and automated CI/CD using **GitHub Actions**, Docker Compose, and **AWS EC2**.

ChatCalSpot | *React, Node.js, Express, Socket.IO, MongoDB, Gemini AI*

[GitHub](#) | [Live](#)

- Integrated **Google Gemini AI** into real-time conversations to detect meeting intent and extract structured event details including **title, date, time, and location**.
- Engineered an **LLM-based structured extraction pipeline** to transform unstructured chat messages into structured JSON event metadata for downstream application workflows.
- Built an **AI-assisted scheduling workflow** that converts detected meeting details into interactive event previews and enables direct **Google Calendar event creation**.
- Developed **real-time messaging using Socket.IO**, with JWT authentication, message persistence, media sharing, read receipts, and live user presence tracking.

Certifications & Achievements

- Solved **400+ DSA problems** on **LeetCode** and **GeeksforGeeks**.
- Earned the **Foundational Certificate in Data Science** from **IIT Madras** in 2024.
- Completed the **Professional Certificate in Java Object-Oriented Programming** offered by **Codio** through **edX**.
- Secured **Rank 42** among **7,000+ candidates** in **APECET** and **Rank 1357** among **80,000+ candidates** in **POLYCET**.

Technical Skills

Languages: Java, JavaScript, Python, SQL, C

Frontend: React.js, Next.js, TypeScript, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Microservices

Databases: PostgreSQL, MongoDB

DevOps Cloud: Git, GitHub, GitHub Actions, Docker, Nginx, AWS EC2, Postman

AI: RAG, Vector Embeddings, Google Gemini, pgvector

Core CS: DSA, OOP, DBMS, Operating Systems

Education

JNTUA College of Engineering, Anantapur

Jul 2022 – Apr 2026

Bachelor of Technology in Electronics and Communication Engineering

CGPA: 7.78/10
